

Happy Planet

A SUSTAINABLE MATHS GAME

HAPPY PLANET HEROES!

We all can be sustainability heroes for a happy planet. So no matter who won the game, there is a medal for each player. Let's share the good climate actions and habits to change the world together, one action at a time!

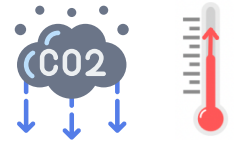

INSTRUCTIONS

HOW TO START: Use a counter for each player. Each player starts from tile number 1. The goal is to reach the last tile (tile 63) with the smily happy planet.

YOUR TURN: Roll the dice and read the upward face. You could find a quiz to solve to calculate your move or some other instructions to follow.

END OF THE GAME: The first one who reaches tile 63 ends the game.

If the temperature increases ("snakes") you will have to go back.
If CO2 emissions decrease ("ladders") you go forward faster.

CREATE YOUR OWN GAME!

Customise your board: in each green tile, you can add a good or bad climate action that could decrease CO2 emissions or increase the temperature of the planet.
